PARTS & ACCESSORIES

BULLETIN NO. 13

January 31, 1947

TO ALL DEALERS:

Subject: Correction - Advance Chassis Parts List

In the General Information Section of the Kaiser and Frazer Advance Chassis Parts List at the bottom of Page 6, under the heading "IMPORTANT NOTICE" you will find a list of the symbols used in connection with engine numbers to designate the various oversize and undersize parts used in the manufacture of the engine.

Since the publication of this Chassis Parts List changes have been adopted in the manufacturing standards which alter the code letters or symbols shown in this Parts List. Please change these to read as follows:

- "A" - Designates .010" undersize main and rod bearings
- "X" - Designates .002" undersize main bearings
- "N" - Designates .020" oversize pistons
- "AN" - Designates .010" undersize main and rod bearings and .020" oversize pistons
- "NX" - Designates .020" oversize pistons and .002" undersize main bearings

The above code letters designating the undersize and oversize parts will appear as a suffix to the engine number.

Corrections made to your Parts Lists as shown above, as well as passing this information along to those in your organization who have use for it, will be of assistance in avoiding errors in ordering parts for these engines or may assist in specifying parts required for repairs before the engine is actually disassembled for repairs.

Sincerely,

General Manager
